

# DO HANDRAILS ENCOURAGE BACTERIAL GROWTH?

Frequently touched surfaces are ideal for the growth of bacteria, which is why a **high number of microbes and bacteria** are commonly found in places like kitchens, bathrooms and offices.

## WHAT ABOUT HANDRAILS?

We tested to find out our handrail's compounds resistance to fungi and bacteria.

Engaged 3rd party certified laboratory to test (in accordance to ISO 846:2019)

Our compounds were treated with fungi and bacteria under the specified time and conditions

Results showed no apparent growth of bacteria and fungi on the surface of the samples

Results prove that Semperit's compound **neither encourages nor provide any nutrients for bacterial growth**. The high resistance to bacteria growth can be attributed to the ingredients and formulation of Semperit's compound, which prevents the settling of bacteria on the handrail surface.

### Tips on handrail surface maintenance

To minimize dirt accumulation on handrail surfaces, it is recommended to **practice routine cleaning once a day**. Semperit has developed a range of cleaning products specially formulated for the cleaning of handrail materials.
